Program Coordinator

Name: Enela Lumshi
Email: **Enela.Lumshi@nygh.on.ca**

Overview of Rotation

Clerks on this rotation rotate through Labour and Delivery, Gyne OR/Wards and a Preceptor based ambulatory clinic experience. During the L&D component, clerks spend the day assessing antepartum patients in our triage assessment unit, following pregnant patients through labour and delivery, and caring for postpartum patients. During the OR/Wards component, clerks will care for our gynaecology inpatients, spend time in the gynaecology operating room, and assess acutely ill patients in the emergency room with gynaecological emergencies. Three weeks will be spent with two preceptors and provide an opportunity to participate in obstetrics and gynecology clinics. This ambulatory experience is supplemented with exposure to EPAC (early pregnancy assessment clinic), BPP (biophysical profile) clinic, Genetics clinic and Midwifery Care. There is also an optional Reproductive Options experience for those who are interested.

Schedule

Two weeks of Labour and Delivery, three weeks of Ambulatory Clinics and one week of Gyne OR/Wards.

Educational Activities

There are almost daily seminar sessions at the start of every day that will cover the topics from the OB/GYN Clerkship syllabus. Clerks can also attend Departmental Grand Rounds, pathology rounds, and interesting case rounds. Clerks can also attend resident teaching every Friday from noon-1PM with topics including fetal heart rate tracing interpretations, technical skills workshop, SOGC guidelines review, and “bread-and-butter” OBGYN topics.

Assessment

Dr. Devarajan will meet with you on the first day of your rotation for an orientation. You will have a mid-term and final evaluation based on encounter forms that you will collect during the course of your rotation.
