Re: A new panel – Comprehensive Cancer Panel

A new panel, Comprehensive Cancer Panel (76 genes) will be added to the hereditary cancer panel test menu effective May 2, 2022.

This comprehensive panel includes all the genes in the other panels plus four additional genes: EGLN1, EXT1, EXT2 and RECQL.

The updated test requisition is available on the North York General website (www.nygh.on.ca/genetics/labs).
